PROFILE

Platform and integration focused engineer with experience building critical-infrastructure systems across identity, APIs, Kubernetes, GitOps, observability, SCADA, and time-series data. Experienced in deploying and supporting systems across renewable energy assets, with an emphasis on reliability, secure access, repeatable delivery, and safe migration.

CORE CAPABILITIES

Platforms	Kubernetes · Argo CD · Terraform · Docker · RBAC
Integration	REST APIs · OAuth2 · OIDC · SAML · OPC UA · MQTT · MCP
Data	PostgreSQL · TimescaleDB · MySQL · Data Migration · Continuous Aggregates
Observability	Prometheus · Loki · Grafana Alloy · OpenTelemetry
Development	Python · Java · JavaScript · Node.js
Critical Infrastructure	Ignition · Ignition SDK · SCADA · AESCSF · Authentik · Entra ID · MFA

EXPERIENCE

Senior Automation Engineer

Cromarty Automation

2026 — Present

- Developing and deploying an operational-data platform integrating Ignition SCADA, secure APIs, identity services, and TimescaleDB across nine solar and battery sites.
- Designed an OAuth2-secured data-access service providing controlled and auditable access to live and historical operational data.
- Working across deployment architecture, access control, observability, reliability, and continued platform development.

Automation Engineer

Cromarty Automation

2025 — 2026

- Deployed SCADA runtime environments and containerised supporting services through GitOps workflows for two greenfield BESS projects.
- Delivered engineering work spanning SCADA platforms, deployment automation, integrations, and supporting services across more than 15 renewable energy, battery storage, and gas assets, including on-call support for six operational assets.
- Led repeatable platform patterns for containerised services, reverse-proxied HTTPS, redundant Ignition gateways, database replication, and development environments.
- Planned historian and TimescaleDB migrations across roughly 10 sites and more than 1 TB of raw operational data.

OT Engineer

Cromarty Automation

2023 — 2025

- Worked across renewable energy, gas, and industrial assets representing more than 1 GW of generation capacity.
- Delivered AESCSF-aligned cybersecurity assessments across three sites and helped establish security baselines, audit procedures, and remediation priorities.
- Delivered SCADA upgrades, OPC UA and MQTT integrations, edge deployments, and operational documentation.

KEY PROJECTS

Operational Data Access Platform

Integrated live SCADA and historian data with self-hosted identity, using OAuth2 to provide controlled and auditable access across nine solar and battery sites.

Self-Hosted Identity and Access Migration

Migrated roughly 100 user accounts and 7 applications from Okta to a self-hosted identity platform across OIDC, SAML, MFA, claims, and Entra domain routing.

Kubernetes GitOps Platform

Developed a Terraform and GitOps-based Kubernetes platform with tenant RBAC, reducing ideal environment setup from roughly 2–3 hours to around 30 minutes.

EDUCATION

Bachelor of Information Technology

Griffith University

2023

Software Development major. Griffith Award for Academic Achievement (GPA 6.5); High Distinction for an industry-partnered UI/UX project with Optus.
